

Homepage Andrew U. Frank

Mostly useful to download publications!

My homepage is **work in progress**; a place to test new ideas and communicate with others.

It contains:

- A nearly complete list of my **publications for download**.
- Unpublished writings for discussion, mostly as **blog** and some **longer texts**. The pieces are alternatively available as **pdf** in article format, which makes printing and reading for some more comfortable.
- The **last versions of the lecture notes** I used at TU Wien (dated 2005)
 - [Practical Geometry](#), The Mathematics for GIS.
 - [Empirical Ontology for GIS](#), A computational ontology for space, time, matter and information.
 - [Feasibility](#) and [Realization](#) of Geoinformation Products - in german (2014)

The homepage is produced by my [SGG program](#) and should adapt to any screen width - thanks to [w3c templates](#) - and will be further improved with images.
